STOP

Maintain personal safety
If clothes catch fire, extinguish
Isolate electrical source
Avoid chemical cross-contamination
Stop the burning process

REMOVE

Remove any burnt/contaminated clothing

Leave any melted/adherent clothing

Remove all nappies, jewellery and contact lenses near burned area, if able

Best Practice

THERMAL BURN

Commence cooling/irrigation of burns as early as possible Do not apply ice/iced water/ice packs Irrigate with cool running tap water for 20 minutes Cooling beneficial up to 3 hours post burn injury

COOL THE BURN WARM THE PATIENT

CHEMICAL INJURY

Do not delay immediate irrigation for detailed assessment of patient or acquiring a particular irrigation fluid, regardless of delay in presentation.

Commence urgent irrigation with a sterile isotonic solution (e.g. Hartmann's or Normal Saline), an amphoteric solution (Diphoterine®), or water.

Keep patient warm to prevent hypothermia (children and elderly are most susceptible)

If water supply is limited

Use a cool water compress Change compress frequently over 20 minute period

Hydrogel burn dressings

LSEBN does not support the use of hydrogel burn dressings Least effective method of removing heat from the wound

COVER

Fully irrigated chemical injuries with a wet compress
Fully cooled thermal burn wound with loose longitudinal strips of cling film
Do not apply cling film to face
Do not wrap cling film circumferentially

CALL

Seek early advice from **local Burn Service**

All burn injuries that fall within the **Burn Referral Criteria** should be discussed with the **local Burn Service**

Telephone support and advice on initial care of any patient with a burn injury is available at all times
